**Framing Guidelines For Agro Based Hill Town ,Case Of Vattavada,Munnar**

Over several decades down the lane , the topographic characteristics at the site had been playing a major role of being the determinants of the Urban Forms that emerges at the Hill Towns . Being aware of the fact that , there are no specific formula behind the formation of certain settlements t the Hillls , the research aims at understanding the various other parameters that are associated for the development of an urban form .

Research goes deeper into settlement , enquiring about the varied urban forms at the Hill Town's settlement , alongwith their shapes , while looking in to the experience

( referring to notions of the public and the social realm ) of the Hill towns at the Urban scale , which in turn would cater to the identity of the city .

However the structuring of the Hill Towns would see a change of development , when agro based concepts also get associated with it at the urban scale .

The study aims at documenting the growth in the urban Fabric of Hill Town till date, the influence an Agro Based Principles would have on it and thereby framing guidelines to aid in the formation of a Hill Town .

***Key Words:*** Hillstations, urbanization, landuse, migration, population, built intervention , ecological issues .
