Food In The City:

Understanding Spatial Relationship Between Food And Urban Form

It is widely accepted that no city was ever built without considering where its food was to come from. Urbanization and globalization made the context of modern cities food system into more complex. The relevance of natural determinants are replaced by alternate food networks. Research establishing the determinants of food and their spatial relationship to the urban form from the literature. Further the findings are analyzing on the city of Calicut.

Keywords: Food, foodscape, determinants of food, urban form, urbanism, spatial relationship
